

Airline Customer Ratings

Interactive Visualisation Application

GROUP VA24 13 MONIKA VEDRAL

Content

- Goal of the application
 - Intended user(s)
- Data structure
 - AS index
- Chosen visualisations
 - Barchart
 - Linechart
 - Heatmpa

Goal

Analyze airline ratings

- to uncover trends in **passenger satisfaction** and
- enable **benchamarking with other airlines**.

Intended users:

- Airline companies; seeking to improve customer experience and perform benchmarking with other airlines
- Travelers; looking for insight into airline quality

Data Structure

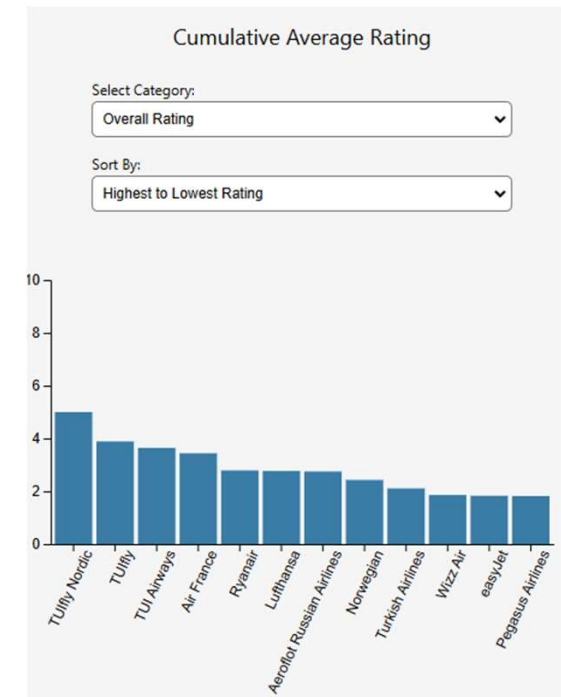

- Data extracted from **Kaggle** (airlinequality.com)
- Initially much larger set of airlines exceeding the AS index restrictions
 - Currently: 1010 tuples x 16 dimensions = **16160 AS**
 - Contains data only for the 10 biggest airlines in Europe and data from 2015=<
- The data set consists of the following **attributes**:
 - ID, Airline Name,
 - Overall Rating,
 - Review Date, Date Flown,
 - Seat Comfort, Cabin Staff Service, Food & Beverages, Ground Service, Inflight Entertainment, Wifi & Connectivity, Value For Money, and
 - Recommendation Status, Verified, Type of Traveller, Seat Type

Chosen Visualisations

- Barchart
- Linechart
- Heatmap

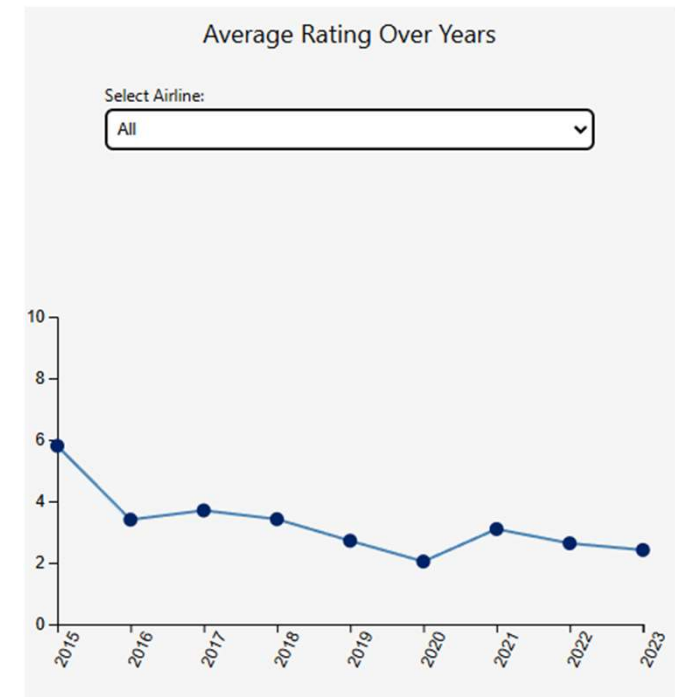

Barchart

- Displays category-wise ratings, allowing users to compare airlines based on specific criteria
- multiple categorical rating attributes exist in the data set
→ makes a comparative bar chart the best approach to visualize them

Linechart

- Tracks changes in average ratings over time, enabling users to identify trends and performance improvements
- data set includes both a review date and a flight date, it allows for temporal analysis → making a line chart a logical choice

Heatmap

- Shows the distribution of ratings, highlighting common rating patterns and outliers
- Implements PCA – dimensionality reduction
- data set contains multiple rating dimensions
→ explore how frequently certain scores appear
